

PAVILION 2, TEL AVIV CONVENTION CENTER | JANUARY 30, 2018

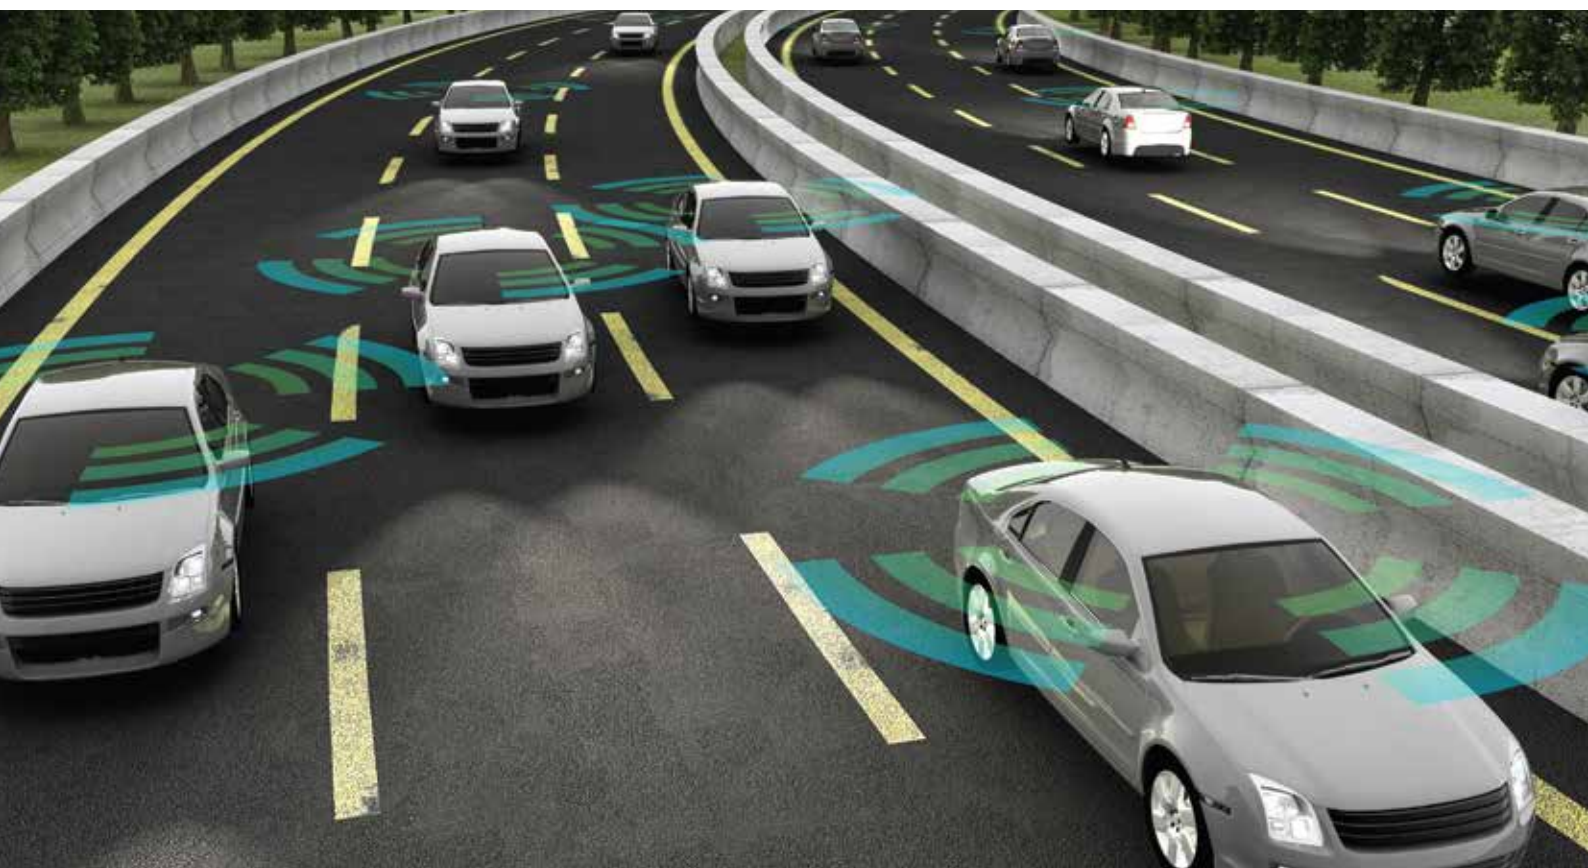

In recent years, Israel has become an automotive powerhouse, with dozens of mature companies and hundreds of startups succeeding in disrupting the mobility industry. After the acquisition of Mobileye by Intel for a staggering \$15.3 billion USD, this notion got a dramatic boost, not to mention the \$300 million USD investment in Gett by Volkswagen, and hundreds of millions of dollars invested in Israeli companies such as Argus Security, Otonomo, Valens, and many more.

Israeli companies are "killing it" in cybersecurity for cars : big data, AI, chips, sensors, vehicle-to-vehicle communication, radars and more. To this end, Cybertech proudly presents "AutoTech Tel Aviv" on January 30, 2018, for the first-ever conference and exhibition of its kind, focusing on the future of smart mobility and the automotive industry. The conference will include keynotes and panels from leading figures and decision-makers of the high-tech ecosystem, government, academia and the international mobility industry.

AutoTech Tel Aviv 2018 is an initiative of Cybertech, the leading networking and global events platform for cyber solutions, technologies, innovation and investment. You can find Cybertech events around the world, including Tel Aviv, Italy, Singapore, Tokyo, Panama, Toronto, Fairfax, and more!

Cybertech's largest event, the flagship Cybertech Tel Aviv, includes over 13,000 visitors and delegates from over 60 nations, and hundreds of participating companies and innovative start ups.

AutoTech Tel Aviv is part of Cybertech Tel Aviv 2018 Conference & Exhibition, taking place January 29-31, 2018
